TOOLS: Mozilla Firefox

I am pretty impressed by [Mozilla Firefox](#) because of:

- the ease-of-use
- the skins possibility
- the speed
- the bookmarks management
- the integrated pop-up blocker
- the integrated download manager
- the tabbed browsing
- the great IE settings import function
- the size and memory footprint of the application - install file: about 4.8 MB

After my very intensive test period, I can confirm all the mentionned arguments above!
This browser is definitely awesome. I'm conquered...

Let me tell you which config I'm using now:

- Theme: [Qute v2.1.2](#)
- Extension: [All-in-one Gesturey v0.12.1](#), description of the gestures [here](#)
- Extension: [googlebar v0.0.24](#)
- Extension: [Google Pagerank v0.6](#)
- Extension: [SwitchProxyTool v1.1](#)
- Extension: [SingleWindow v1.0](#)
