TOOLS: The Panorama Factory v3.2

I am testing different panoramic stitching tools and I find one of them - [The Panorama Factory v3.2](#) from [Smoky City Design](#) - particularly good:

- Very easy-to-use interface
- In detail, a lot of interesting and powerful options you can play with: proper integration of the focal length (possibility to give only the type of digital camera), an efficient correction of brightness and exposure, etc.
- The possibility to generate images, QuickTime VR movies, an IVR object (for iSeeMedia Java viewer or browser plug-in)
- The performance is quite impressive

One example I generated with Panorama Factory with 6 JPEGs (2608x1952). Be careful, the original size is 9957x1660 and the file is about 4.4 MB !!

The full product costs \$59.95 and I bought it.
